Learning Objectives

- Describe the role of CBCT and other advanced imaging technologies in diagnostic bronchoscopy.
- Compare and contrast CBCT, digital tomosynthesis, and other image-guided bronchoscopic techniques.
- List the main features and general operation of CBCT and other advanced imaging technologies when used with various bronchoscopy platforms.
- Identify strategies for obtaining access to CBCT and other advanced imaging modalities.

Course Information

Saturday, April 11, 2026, 7:30am to 5:00pm
Sunday April 12, 8:00am to 1:30 pm

This masterclass in CBCT and advanced imaging for bronchoscopy is designed for clinicians at all levels – whether you’re just starting a peripheral bronchoscopy program or looking to refine complex, image-guided workflows. Led by thought leaders in advanced bronchoscopy, this course blends rigorous didactics and literature review with an introduction to state-of-the-art and cutting-edge technologies, comprehensive hands-on training, and opportunities to network with peers and industry. Attendees also receive practical guidance on technology acquisition and how to build and operationalize a CBCT or advanced imaging-guided bronchoscopy program at the institutional level.
